

## ABSTRACT

An object is to provide a navigation apparatus capable of outputting geographic information without depending on a display. When determining at step ST11 that a destination is assigned, the 5 navigation apparatus interprets geography of an area around the assigned destination at step ST12, and generates geographic information for indicating the geography of the area around the destination as a voice output. Thereafter, the navigation apparatus outputs the voice output indicating the inputted 10 geographic information through a loudspeaker.
